Scanify

Passports Device

DEVICE FEATURES

Computer + Scanner in One Device

We have integrated a complete computer with a scanner into a single, cost-effective, compact device.

Scanning Passports or Cards using One Device

Our talented engineering team has developed a device that can scan passports and cards using the same device.

Data Extraction Using Artificial Intelligence

We extract the data printed on passports and cards in a textual format for various uses.

Storing Data in Various Ways

The device Stores the data extracted either in its internal memory or on a server via the network, or it can be used to fill in fields for a program or directly print on paper forms.

Saving Data in Multiple Formats

The device compiles the data after formatting it according to the client's preferences and saves it in multiple formats such as (PDF, Word, Excel and more).

SPECIFICATION

PROCESSOR

Quad-Core 64-bit Arm
Cortex A76

WIFI

Dual-band 802.11ac

ETHERNET

Gigabit Ethernet, with
PoE+ support

RAM

LPDDR4X-4267 SDRAM

BLUETOOTH

5.0 / Bluetooth Low Energy
(BLE)

USB

2×USB 3.0 and 2×USB 2.0
ports
